Description

The steam eye mask has studied the self-heating temperature control sheet technology, which combines the moisture in the air with the metal powder in the eye mask to evaporate the moisture of the heating element. It lasts for 25 minutes and maintains a constant temperature of 41 °, generating tiny warm steam that is almost invisible to the naked eye. So as to relieve eye fatigue, moisturize the skin around the eyes, promote eye circulation and achieve the effect of sleep aid, it can also clean up residual substances in cosmetics, dilute dark circles, eye bags, and fine lines.

Maxwarm is one of the leading steam eye mask factories in China. Contact us to create your own package steam eye masks.
